

The Gardens – traffic volumes for the period 6-12 January 2016

Note that Gardens Roads are two way for difficult to compare directly with Ladder Roads, of which only Wightman is two way.

What the numbers seems to say

Statistically there are no huge differences between north south/east west volumes suggesting that drivers enter the road, park up and then leave, so this is probably mainly local traffic.

The exceptions are Chesterfield Gardens and Stanhope Gardens. For Chesterfield the westbound count is significantly higher indicating that vehicles enter this road from Green Lanes to access other roads in The Gardens. For Stanhope the reverse appears to be true with traffic from the eastern part of the Gardens using Stanhope to exit the area to Green Lanes.
